

CCE Surfacing

The Resin Surfacing Specialists

The Resin Surfacing Specialists

Providing Quality Surfaces Nationwide for Over 20 Years

Introducing CCE Surfacing, the Resin Surfacing Specialist Branch of Cirencester Civil Engineering Ltd

We offer the full range of surfacing solutions;
Resin Bound and Bonded Decorative Surfaces, Rubber Crumb, Block Paving, Tarmac, Pattern Imprinted Concrete

Our team of experts can oversee your project from conception to completion

Cirencester Civil Engineering have a 20 year record of prestigious projects delivered on time, within budget and to the highest standard. Our top professionals micro manage every project.

From Buckingham Palace to the Olympic Park to Coronation Street, our resin surfaces have expertly covered miles of the UK's Prime Real Estate.

The perfect 'finishing touch' for any project

Based in the Cotswolds, our dedicated team of Surface Operatives are working nationwide to the highest standards on both commercial and residential projects

BONDED

The 'Resinset™' Rein Bonded Paving is suitable for a wide range of surfacing projects where an attractive, gravel surface, is required.

Resin bonded surfacing is non-permeable and must be laid on a non-porous fine wearing course asphalt or concrete base. With resin bonded paving, soakaways and ACO drains should be installed to prevent run-off.

Resin is spread out on the prepared surface and the chosen gravel is liberally scattered to completely cover it and allowed to dry. Brushing away any loose stone reveals a seamless, pristine surface, ready for years of use. A resin bonded surface has a coarse texture, creating the appearance of gravel without moving.

BOUND

The 'Resinset™' Resin Bound paving is a fully permeable paving solution which allows water to freely drain through the surface. Meeting the

requirements of Sustainable Urban Drainage systems (SUDS) standards, this helps to prevent standing water and largely eliminates surface water runoff.

This system is mixed on site and cold applied, using our high quality clear resin binder to coat the aggregate. The resin and aggregates are thoroughly mixed together prior to laying – ensuring that the aggregate is completely coated and so providing a totally bound surface. A resin bound surface has a smoother finish, is more durable and requires less maintenance.

Whichever system is chosen, the natural dust free aggregate is available in a wide range of colours that are an attractive alternative to tarmac, paving and gravel.

CCE Surfacing started trading in 1997 and have provided miles of quality decorative surfaces to properties of all sizes Nationwide (including Buckingham Palace).

We offer a 'whole package' service from conception to completion.

- Resin Bound
- Resin Bonded
- Rubber Crumb
